PROFESSIONAL SUMMARY

Full-Stack Software Engineer with professional experience since 2008 across software development, systems analysis, enterprise applications, databases, integrations, and software quality. Strong hands-on experience building and maintaining applications with PHP, Laravel, JavaScript, React, TypeScript, SQL, MySQL, REST APIs, AJAX, Docker, and modern web development practices. Professional background includes enterprise systems at IBM, database development with Oracle PL/SQL at NSI, international software quality projects at BairesDev, and end-to-end application development through Vetor256. Experienced throughout the software lifecycle, from requirements analysis and system design to implementation, database modeling, testing, debugging, maintenance, and deployment. Also experienced with automated testing using Selenium and Java, as well as modern backend concepts including queues, asynchronous processing, integrations, Redis, microservices, and messaging.

CORE TECHNICAL SKILLS

Backend: PHP 8.x • OOP • MVC • Laravel • REST APIs • Webhooks • Queues • Redis • API Integrations
Frontend: React • JavaScript ES6+ • TypeScript • HTML5 • CSS3 • AJAX • Responsive Web Development
Data: MySQL • PostgreSQL • Oracle • DB2 • SQL • Schema Design • Query Optimization • Indexing • Transactions
Architecture & Infrastructure: Docker • CI/CD • Git/GitHub • Microservices concepts • AWS fundamentals
Testing & Quality: Selenium • Java • JUnit • Cypress/Pest • API/UI Testing • Regression Testing • Integration Testing • Defect Analysis • Jira
Additional: Java • Spring Boot • Kafka • RabbitMQ • OpenAPI/Swagger • Node.js • Agile/Scrum/Kanban

PROFESSIONAL EXPERIENCE

Vetor256 — IT Systems Analyst / Full-Stack Developer | Nov 2024 – Present | Brazil | Self-Employed

- Design and develop full-stack business applications using PHP, Laravel, JavaScript/TypeScript, React, MySQL, Redis, Docker, and modern web technologies.
- Work end-to-end across requirements analysis, architecture, implementation, database design, testing, debugging, documentation, and deployment.
- Develop and maintain business systems, REST-based integrations, asynchronous workflows, and API-connected processes.
- Use AI-assisted development tools to investigate problems, review generated solutions, validate implementations, and iterate toward reliable and maintainable software.

BairesDev — QA Engineer | Mar 2022 – Dec 2022 | Remote

- Executed manual and automated testing for software developed for international healthcare clients.
- Designed and maintained test cases covering UI, API, integration, regression, and business workflows.
- Automated web application flows using Selenium and collaborated with international Agile teams.
- Documented and tracked defects using Jira and supported quality and reliability improvements.

NSI — PL/SQL Developer | Jul 2018 – Dec 2018 | Brazil

- Developed Oracle PL/SQL routines, Oracle Forms, and Oracle Reports for business processes and system integration.
- Supported SAP integration and large-scale data import/export operations.
- Investigated data and application issues and supported maintenance and reliability improvements.

IBM — Software Quality Assurance Analyst / Systems Analyst | Apr 2008 – Nov 2017 | Brazil

- Maintained and enhanced mission-critical enterprise systems in a large corporate environment.
- Worked with COBOL, DB2, VBA, TSO/ISPF, IBM z/OS mainframe environments, JCL, and SAP MM processes.
- Performed functional, regression, integration, and system testing.
- Worked with ClearCase, ClearQuest, and Rational Unified Process (RUP) in enterprise development and quality processes.
- Analyzed requirements, investigated defects, supported business teams, and contributed to system reliability and continuous improvement.

SELECTED PROJECTS

Dental Clinic Management System — PHP / MySQL / JavaScript / AJAX

- Designed and developed an integrated management system replacing spreadsheet- and paper-based workflows. Implemented appointment scheduling with conflict detection, patient and treatment tracking, financial management, document handling, and administrative approval workflows. Built with PHP 8.2 using OOP/MVC, MySQL 8.0, Bootstrap 5, JavaScript, AJAX, and Chart.js.

Delivery Management System — Laravel / MySQL / Redis / JavaScript

- Built order and delivery workflow management with AJAX, external API integration, Laravel Queues, and Redis, focusing on asynchronous processing, operational reliability, maintainability, and external-system integration.

Car Sales Platform — Microservices Architecture

- Designed a decoupled architecture using Java, Spring Boot, Kafka, Docker, PostgreSQL, REST APIs, and OpenAPI/Swagger. Implemented Inventory, Sales, and Notification services with asynchronous messaging and resilience strategies.

Automated Testing Project — Selenium + Java | Completed Aug 2026

- Built automated web tests using Java, Selenium, Maven, JUnit, Page Object patterns, ChromeDriver, structured test cases, and defect tracking.

EDUCATION & CERTIFICATIONS

- BSc in Computer Science** — Anhanguera University | 2008–2011
- Extension in Information Systems and Logistics** — Unyleya University | 2014–2015
- Selenium + Java — Automated Testing** | Completed Aug 2026
- IBM DB2 Certifications** — 2 certifications covering relational database administration, SQL, security, transactions, backup/recovery, maintenance, monitoring, and performance tuning
- Rational Manual Tester** — IBM Certification
- Rational Unified Process (RUP)** — IBM Certification
